

SBR Repair

FOR VERY DRY AND DAMAGED SKIN

A well-documented special cream when regular skincare is not enough.

Protects and restores the skin barrier.

High lipid content.

Introduction

The skin is the body's largest organ. The outermost layer of the skin, the epidermis, also called the skin barrier, protects the body from external stress factors such as pollution, irritants and UV-radiation, prevents loss of water, and maintains the moisture of the skin. A weakened skin barrier is less capable of controlling the skin's moisture level, which in turn leads to dry skin.

Dry skin is a very common condition characterised by a lack of water in the epidermis. The most common signs of dry skin are itching, redness, cracked or scaly skin and dry patches. The dry skin can be fragile, easily irritated, and damaged. Exposure to detergents, harsh soaps and certain medications might worsen the condition. It is also well-known that dry skin is weather sensitive and more common during cold winter months and in dry climates. Dry skin is also a typical symptom in individuals with a history of atopic eczema.

The skin barrier has a unique structure and contains a specific lipid matrix which in turn consists of fatty acids, cholesterol and ceramides, and has the function to reduce the water loss of skin. A damaged skin barrier has an altered lipid composition. It takes several days for the skin barrier to replenish its naturally occurring lipids. If the skin barrier does not have a chance to recover, the skin may become chronically dry or irritated. Some people have an innate inferior ability to replenish skin-identical lipids and therefore they have sensitive skin.

Our skin is subjected every day to wear and tear that weakens the protective and moisture maintaining function of the skin barrier. Skin hydration plays a major role in preventing the skin barrier from losing moisture and become damaged.

SBR Repair helps with excessive and chronic dryness

SBR Repair is a well-documented special cream that has been used for generations against very dry and damaged skin, also for eczema prone skin. It has been proved in clinical studies that SBR Repair is an effective skincare cream. SBR Repair is the preferred choice for people who need more than just a regular skincare cream to keep their skin soft, smooth and intact.

What is SBR Repair used for

SBR Repair is a multifaceted special cream and primarily intended for:

- very dry and cracked skin on hands, feet, legs, arms and other parts of the body (including face)
- skin that is exposed to a lot of wear and tear, is genetically prone to have a weak skin barrier, or is generally sensitive
- skincare for eczema-prone skin

SBR Repair is suitable for adults and children from age 0.

How does SBR Repair work

SBR Repair is an emollient cream with high fat content and specific skin-identical lipids (ceramide, cholesterol and fatty acids) that possesses important properties:

- actively protects and restores the skin barrier
- accelerates the skin's own barrier repair
- adds moisture and softens the skin
- prevents water loss and maintains the moisture of the skin

SBR Repair is double-acting since it protects and enhances the barrier function of the skin. It prevents water loss, and with help of specific lipids, identical to those that occur naturally in the skin, restores the skin barrier. SBR Repair provides instant and long-lasting hydration.

How to use SBR Repair

Apply SBR Repair on exposed areas (including the face) at least once a day or more often if needed. Use the cream preferably also in the evening and let it work overnight.

SBR Repair is a water-in-oil (W/O) emulsion. Due to the special formulation of SBR Repair, you may perceive the consistency as more firm than what you are used to. On the other hand, the cream is not sticky and is readily absorbed – a small dab goes a long way.

Ingredients:

Petrolatum, Aqua, Paraffin, Paraffinum Liquidum, Glycerin, Sorbitan Oleate, Copernicia Cerifera Cera, Cholesterol, Ceramide 3, Oleic Acid, Palmitic Acid, Tromethamine, Carbomer.

SBR Repair is fragrance free. Its total lipid content is 63 %.

Storage

Store at or below 25 °C.

Keep out of reach of children.

For external use only.

Avoid contact with eyes.

Dermatology products that people and professionals trust

A trusted brand for over 30 years and was originally developed together with a group of Scandinavian dermatologists. Today, the brand encompasses a range of well-documented skincare products to relieve dry, sensitive, and damaged skin.

Made in Spain.
